Manual Replication Group - Code Document

POLI666: Winter 2026 (Class Replication Project)

Leo Amorim, Aiden McIlvaney, and Alan Nemirovski

2026-05-01

Setup and data loading

```
knitr::opts_chunk$set(warning = FALSE, message = FALSE)
```

```
set.seed(666)

library(tidyverse)
library(haven)
library(lmtest)
library(sandwich)
library(modelsummary)
library(kableExtra)
library(psych)
library(lavaan)

data <- read_dta("moscowpopsurvey.dta", encoding = "Windows-1251")
```

Cleaning data: Constructing variables

Building three time periods

```
data <- data %>%
  rename(day = DATA) %>%
  mutate(period = ifelse(day > 24 | day < 5, 1, 0),
```

```
         dec25 = ifelse(MONTH == 12 & day == 25, 1, 0),
         period1 = period - dec25,
         period2 = ifelse(day > 4 & day < 12, 1, 0),
         electday = ifelse(MONTH == 12 & day == 4, 1, 0),
         #electday = "Election Day"
         protestday = ifelse(MONTH == 12 & day == 10, 1, 0),
         #protestday = "Protest Day"
         period1min = period1 - electday,
         period2min = period2 - protestday,
         #period2min = "Post-Election"
         period3 = ifelse(day > 10 & day < 26 & MONTH == 12, 1, 0))
         #period3 = "Post-Protest"
```

Building trust measures

```
data <- data %>%
  mutate(trustarmy = case_match(q9a, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~ 1,
                                .default = q9a), #Army
         trustpolice = case_match(q9b, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~ 1,
                                  .default = q9b), #Police
         trustfsb = case_match(q9c, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~ 1,
                               .default = q9c), #FSB
         trustcourt = case_match(q9d, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~ 1,
                                 .default = q9d), #Court
         trustmungov = case_match(q9e, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~ 1,
                                  .default = q9e), #City Gov't
         trustfedgov = case_match(q9f, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~ 1,
                                  .default = q9f), #Fed Gov't
         trustduma = case_match(q9g, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~ 1,
                                .default = q9g), #Duma
         trustprocuracy = case_match(q9h, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~
          ↪  1,
                                     .default = q9h), #Procuracy
         trustchurch = case_match(q9i, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~ 1,
                                  .default = q9i), #Church
         #Church was not included in the original paper's analysis,
         #but is included here for subsequent analysis/checks.
         trustun = case_match(q9j, 99 ~ NA, 1 ~ 5, 2 ~ 4, 4 ~ 2, 5 ~ 1,
                              .default = q9j)) #UN
```

```r
#joining trust measures into gov trust index (trustgovind)

data <- data %>%
  mutate(trustgovind = (trustarmy + trustpolice + trustfsb + trustcourt +
                          trustmungov + trustfedgov + trustduma +
                          trustprocuracy)/8)
#Gov't Index (as built by Frye and Borisova 2019)
```

Mapping out/recoding potential confounders

```r
data <- data %>%
  rename(age = q1,
         male = q2,
         wealth = q3,
         education = q5,
         permres = q59,
         nationality = q67) %>%
  mutate(male = ifelse(male == 2, 0, 1),
         wealth = case_match(wealth, 99 ~ NA, .default = wealth),
         education = case_match(education, 99 ~ NA, .default = education),
         permres = case_match(permres, 99 ~ NA, 2 ~ 0, 3 ~ 0,
                              .default = permres),
       nationality = case_match(nationality, 2 ~ 0, 3 ~ 0, 4 ~ 0, 5 ~ 0,
                                6 ~ 0, 7 ~ 0, 8 ~ 0, 9 ~ 0, 10 ~ 0, 11 ~ 0,
                                99 ~ 0, .default = nationality),
       unemp = ifelse(q6 == 11 | q6 == 12 | q6 == 13, 1, 0),
       statesector = ifelse(q7 > 9 & q7 < 13, 1, 0),
       okrug = factor(okrug))

table(data$okrug)
```

```

  1   2   3   4   5   6   7   8   9  10
107 146 173 200 173 232 202 168 120  29
```

Coding partisanship

```r
#nesting each partisanship variable in its own mutate() function
#q62 = "Which party do you intend to vote for?"
#q64 = "Which party did you vote for in the previous election?"
data <- data %>%
  mutate(urplan = 0, urturn = 0,
